PERKINS, 1680.

A PROGNOSTICATION FOR The Year of our Lord God, 1680.

Being the Biſſextile, or Leap-year, and from the Worlds Creation, 5643.

Wherein is contained the deſcription of the four Quarters of the Year: As alſo a Chronological Table of many things worth remembrance, ſince the Creation, until this preſent Year, 1680. Collected for the moſt part out of Eccleſiaſtical Hiſtory, and other good Authors, ſomething augmented. The like not extant by any other.

By Fr. Perkins, Well-willer to the Mathematicks.

LONDON,
Printed by *R. Everingham*, for the Company of Stationers, 1680. *Cum Privilegio.*

A Description of the four Quarters of the Year; and first of Winter.

☉ in ♑ ♒ ♓

ACcording to the custom of Writers in this kind, Winter Quarter is the first Quarter, which took beginning the Eleventh day of December, at which time the Sun entred into the first degree of the cold and dry Sign Capricorn, being the most remote from us in his farthest South Declination, causing the days with us to be shortest, and the nights longest: Which Quarter continueth until the Sun hath slowly passed through Caprieorn, Aquarius, and Pisces. This Quarter doth naturally resemble Old Age.

Of the Spring. ☉ in ♈ ♉ ♊

THis Quarter doth take beginning the tenth of March, at which time the Sun entreth into the first minute of Aries, and doth continue whilst the Sun is passing these three vernal Signs, Aries Taurus and Gemini. This Quarter doth resemble growing Youth.

Of Summer. ☉ in ♋ ♌ ♍

THe Summer Quarter doth take his beginning when the Sun doth enter into the first degree of Cancer, which will be this year the eleventh of June, and doth continue whilst the Sun passeth through Cancer, Leo, Virgo. Now are the days longest, and the Nights least; therefore but for necessity, bid Physick Adieu.

Of Autumn. ☉ in ♎ ♏ ♐

AUtumn or Harvest Quarter, (commonly called the Fall of the Leaf, of some the latter Spring) doth begin when the Sun doth enter into the first degree of Libra, making again the Day and the night of equal length; which will be this year, the thirteenth of September, and doth continue whilst the Sun doth pass through Libra, Scorpio and Sagitarius. This Quarter doth fitly resemble declining Age, and Phlegmatick complexion.

THere will be only two Eclipses this year, and both of the Sun. The first happens March the 20, about 10 in the morning, but very little of it visible to us, but total to such as inhabit the Southern parts of America. The second Eclipse of the Sun falls September the 15, near 8 at night, and therefore invisible to us, but may be seen near the Port of Saint Peter, or the Island of Pozaro.

AN Ephemeris of the Coelestial Motions and Aspects, with the Eclipses of the Luminaries for 20 years, by John Gadbury, Student in Physick and Astrology, beginning, Anno 1662. where his first Part ends; the said first Part beginning at the year 1672. and ending at the year 1682. both which are Printed for, and Sold by the Company of Stationers.

A brief Chronological Description of many things worthy of Memory, that have happened since the Creation, unto this present year of our Lord 1680. with the year of the World in which they happened, in the first Column; faithfully collected from many good Authors.
